Twisted Pair Solutions WAVE® Software Now a Nortel Select Product

Seattle, Washington, USA May 19, 2009 Twisted Pair Solutions (www.twistpair.com), a pioneer in unified communications software built to open standards, today announced that its WAVE® software technology has been designated a Nortel Select Product. Through this designation, Nortel recognizes WAVE software as a best-in-class technology that strategically complements Nortel unified communications and IP telephony solutions, specifically the Nortel Business Communications Manager 50, Communication Server 1000 and Nortel IP Phone 1140E and IP Phone 1150E

WAVE software achieved Nortel Select Product status based on Nortel's analysis of Twisted Pairs' business plan and input from Nortel customers. Additionally, Twisted Pair successfully completed compatibility testing in a Nortel lab environment, earning the designation of Nortel Compatible Product.

WAVE 4.5 is the latest version of Twisted Pair Solution's industry-leading unified group communications software technology and includes new features and functionality designed to deliver greater compatibility and integration capabilities with industry standard platforms. Previous releases of WAVE included features and functionality that extend the reach of enterprise applications and platforms from Nortel and other manufacturers. WAVE 4.5 now includes additional operating system compatibility as well as adding dual stack IPv4/IPv6 protocol capability mandated by the US Federal Government.

By extending its solutions to include two-way radios and other disparate devices, Twisted Pair is creating clear market differentiation for Nortel and its IP telephony and unified communications technologies, said Tom Guthrie, Twisted Pair's President and CEO. Achieving Select Status with Nortel is a strong endorsement and we look forward to working with more of its global partner community.

As part of the Select Product Program, Partner Advantage contracted Nortel resellers can order WAVE software through Nortel. This gives Nortel customers access to Twisted Pair Solutions as a recommended third-party product via Nortel channel partners.

About Twisted Pair Solutions, Inc.

Twisted Pair Solutions is the software company behind WAVE®, the only Radio-over-IP (RoIP) platform designed specifically to extend the capability, flexibility and value of other communications technologies, products and solutions. OEM vendors, major systems integrators and software development companies from around the world have chosen to deploy, integrate or build upon our core platform technology because only a WAVE-powered solution is synonymous with battle-hardened, globally deployed, mission-critical voice communications. Twisted Pair Solutions is headquartered in Seattle, Washington, USA with offices in the United Kingdom and Australia. Visit us at www.twistpair.com
