Twisted Pair Solutions, through our global partner channel, provide customers around the world with industry-leading solutions and services that address their mission-critical communications needs:

Packaged WAVE

For system integrators who deliver off-the-shelf WAVE to their customers, Twisted Pair Solutions offers WAVE in a packaged form. Built upon the same underlying architecture and core WAVE components used by our partners, packaged WAVE offers a suite of applications ranging from desktop and mobile clients, to IP phone clients. Packaged WAVE can be obtained through any of our Integrator or Solution Developer Partners and can be mixed and matched with custom clients from WAVE Solution Developers to meet any deployment scenario.

WAVE SDK

The WAVE SDK allows software developers to create custom client applications that include WAVE's unique communications capabilities. Independent Software Vendors (ISVs) who specialize in software product development and hardware vendors (OEMs) who embed technology and applications onto their equipment are typical users of the WAVE SDK.
